ACRYLIC SCRATCH REMOVER

Clean the surface and apply a little paste. Using a soft, clean cotton cloth polish the scratched areas using heavy pressure for 2-3 minutes. For deep scratches repeat application several times. Very deep scratches should be treated before-hand with special abrasive paper (grit:1500) and a little water. Finally remove residue and clean the treated surface with water.

Do not use on any printed, varnished or coated surfaces. Do not use on Polycarbonate (PC). To be on the safe side, first test the polish on an unexposed surface. Keep out of reach of children.
